Office Action Summary

Art Unit: 1761

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-22, 25-27, 30-34 and 37 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Hill (columns 15-19).

Hill discloses a coated chewing gum as claimed by applicant including each of applicant's claimed components in the amounts claimed and applicant's claimed method for making. The chewing gum in Hill has a coating including sorbitol and/or xylitol, a medicament and sodium bicarbonate. The gum base includes sodium bicarbonate, a cooling agent, a plasticizer and a high intensity sweetener.

4. Claims 28, 29, 35, 36 and 38 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hill in view of Andersen et al and Gudas et al.

It would have been obvious to substitute caffeine for the benzocaine used in Hill (column 15) since both are used alternatively as active agents in chewing gum, as evidenced by Andersen et al (column 8, lines 46-60). Further, it would have been obvious to encapsulate the caffeine to control release thereof during chewing of the

gum since it is well known to prepare chewing gum including encapsulated caffeine to control its release, as evidenced by Gudas (pages 3-14).

5. Any inquiry concerning this communication from the examiner should be directed to Arthur L. Corbin whose telephone number is (571) 272-1399. The examiner can generally be reached on Monday--Friday from 10:30 to 8:00 p.m..

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Milton Cano can be reached on (571) 272-1398. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
